

HEAP SORT LAB

list

5	22	9	76	63	81	48	92	54	28
0	1	2	3	4	5	6	7	8	9

Build Heap

1) $\text{index} = \text{length}/2 - 1 = \frac{10}{2} - 1 = 4$ leaves

Parent of last node in tree: $\text{list}[4] = 63$

2) Left subtree: $\text{list}[b] \Rightarrow \text{list}[4 \cdot 2 + 1] = \text{list}[9] = 28$

Right subtree: $\text{list}[c] \Rightarrow \text{list}[4 \cdot 2 + 2] = \text{list}[10] = \text{DNE}$ or null

b) $\text{list}[\text{largestIndex}] = \text{list}[b] \Rightarrow \text{list}[9]$

greater child b/c $\text{list}[b] > \text{list}[c]$

c) $\text{list}[a] > \text{list}[b]$ already a heap

28

d) Skip

$\text{list}[3]$ index=3 $\text{list}[3] = 76$

2) Left ST - $\text{list}[b] \rightarrow \text{list}[3 \cdot 2 + 1] \rightarrow \text{list}[7] = 92$

Right ST - $\text{list}[c] \rightarrow \text{list}[3 \cdot 2 + 2] \rightarrow \text{list}[8] = 54$

b) $\text{list}[\text{largestIndex}] = \text{list}[b]$ largestIndex=7
b/c $\text{list}[b] > \text{list}[c]$

c) $\text{list}[a] < \text{list}[\text{largestIndex}]$, so swap occurs

5	22	9	76	63	81	48	92	54	28
0	1	2	3	4	5	6	7	8	9

Before

5	22	9	92	63	81	48	76	54	28
0	1	2	3	4	5	6	7	8	9

After

*

d) repeat for list [7]

1) RST - list[5] = 81

LST - list[6] = 48

So move on

list[2] → list[7] = 9

2) 1) RST - list[5] = 81 → list[5]

LST - list[6] = 48 → list[6]

b) list[5] > list[6] so largerInd = 5

c) list[largerInd] > list[2] (list[2]), so swap!

5	22	9	92	63	81	48	76	54	28
0	1	2	3	4	5	6	7	8	9

5	22	81	92	63	9	48	76	54	28
0	1	2	3	4	5	6	7	8	9

- d) $\text{list}[2] = 81$
 a) $\text{LST} - \text{list}[5] = 9$
 b) $\text{RST} - \text{list}[6]$ so already heap
-

a) $\text{list}[1] = 22$

$\text{LST} - \text{list}[3] = 92$ b

$\text{RST} - \text{list}[4] = 63$ c

b) $\text{list}[3] > \text{list}[4]$ so $\text{largerInd} = 3$
 b c

c) $\text{list}[3] > \text{list}[1]$ so swap

5	92	81	22	63	9	48	76	54	28
0	1	2	3	4	5	6	7	8	9

d) Repeat since swap $\text{list}[3] = 22$

a) $\text{LST} - \text{list}[7] = 76$ b

$\text{RST} - \text{list}[8] = 54$ c

b) $\text{list}[7] > \text{list}[8]$ so $\text{largerInd} = 7$
 b c

c) $\text{list}[7] > \text{list}[3]$ so swap

5	92	81	76	63	9	48	22	54	28
0	1	2	3	4	5	6	7	8	9

2) a) $\text{list}[0] = 52$

$\text{LST} - \text{list}[1] = 92$ b

$\text{RST} - \text{list}[2] = 81$ c

- b) $\underset{b}{list[1]} > \underset{c}{list[2]}$ so $largerInd = 1$
- c) $list[1] > list[0]$ so swap

92	5	81	76	63	9	48	22	54	28
0	1	2	3	4	5	6	7	8	9

d) Repeat $list[1] = 5$ ✓

LST - $list[3] = 76$ b

RST - $list[4] = 63$ c

b) $\underset{b}{list[3]} > \underset{c}{list[4]}$ so $largerInd = 3$

c) $list[3] > list[1]$ so swap

92	76	81	5	63	9	48	22	54	28
0	1	2	3	4	5	6	7	8	9

d) Repeat $list[3] = 5$

LST - $list[7] = 22$ b

RST - $list[8] = 54$ c

b) $\underset{c}{list[8]} > \underset{b}{list[7]}$ $largerInd = 8$

c) $list[8] > list[3]$ so swap

92	76	81	54	63	9	48	22	5	28
0	1	2	3	4	5	6	7	8	9

HEAP SORT

1) swap

2) Heapify

28	76	81	54	63	9	48	22	5	92
